

**Istanbul Okan University**  
**Software Engineering Department**  
**CENG 374 Internet Programming**  
**Assignment 1**  
**(Project Name: Istanbul Explorer)**  
**Mustafa Doruk ÇİL 200218006**

## **Project Aim**

Providing information about cultural events corresponding to a specific city or a region. This website allow users to obtain information about events and user feedbacks about events.

## **Used Technologies**

**HTML:** Used for constructing the structure of pages.

**CSS:** Used for styling the web pages.

**Javascript:** Used for adding dynamic elements and interactive components.

**Node JS (Server Side):** Used for processing data, interacting with database, and generating dynamic content.

**MySQL Database:** Used for storing event details, event comments and event registration information.

## **Used Node JS Packages in This Project**

**Express (Version: 4.18.3):** Used for server side structure of the website.

**Body Parser (Version: 1.20.2):** Used for getting form values from http requests.

**EJS (Version: 3.1.9):** Used for dynamic webpage rendering.

**Nodemailer (Version: 6.9.12):** Used for mailing for informing administrator about website contacts and event registration information for users.

## **Project Github Link**

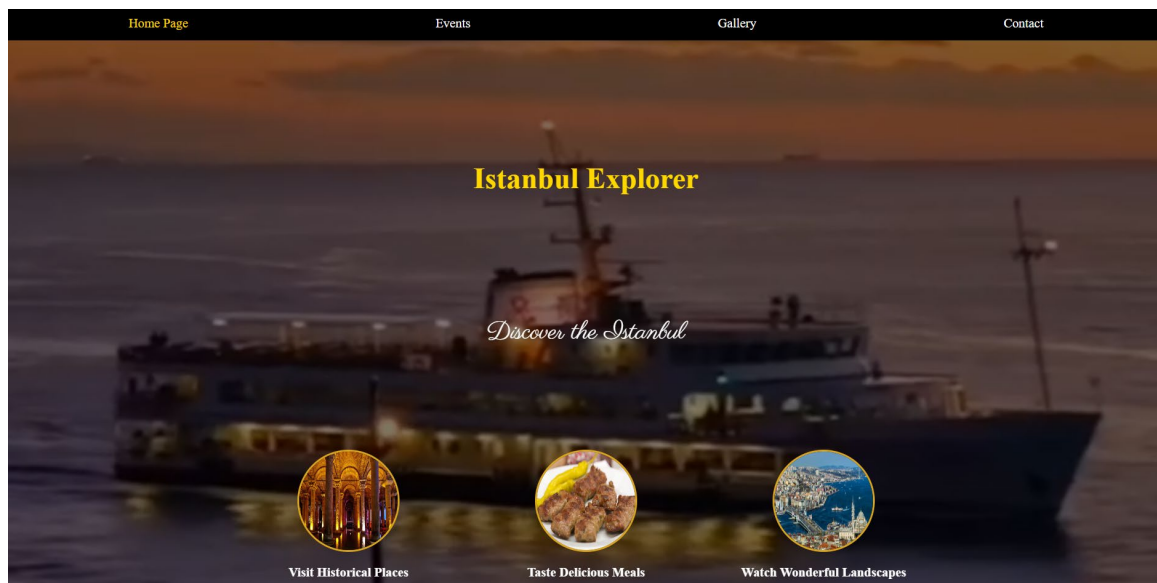

<https://github.com/zThyphon/Istanbul-Explorer>

## Web Page Screenshoots

**Responsive Design:** This website ensure adaptable webpages to various screen sizes.

### Home Page

There is an video background exists in Home Page. User can understand a general view about Istanbul events. Also user can understand main events. User can also navigated other pages via navbar.

**Photo 1:** View of Home Page (Large Screens)

**Photo 2:** View of Home Page (Mobile Device Screen)

## Events Page

User can get information about upcoming events in this page. User is navigated event detail page with clicking the event.

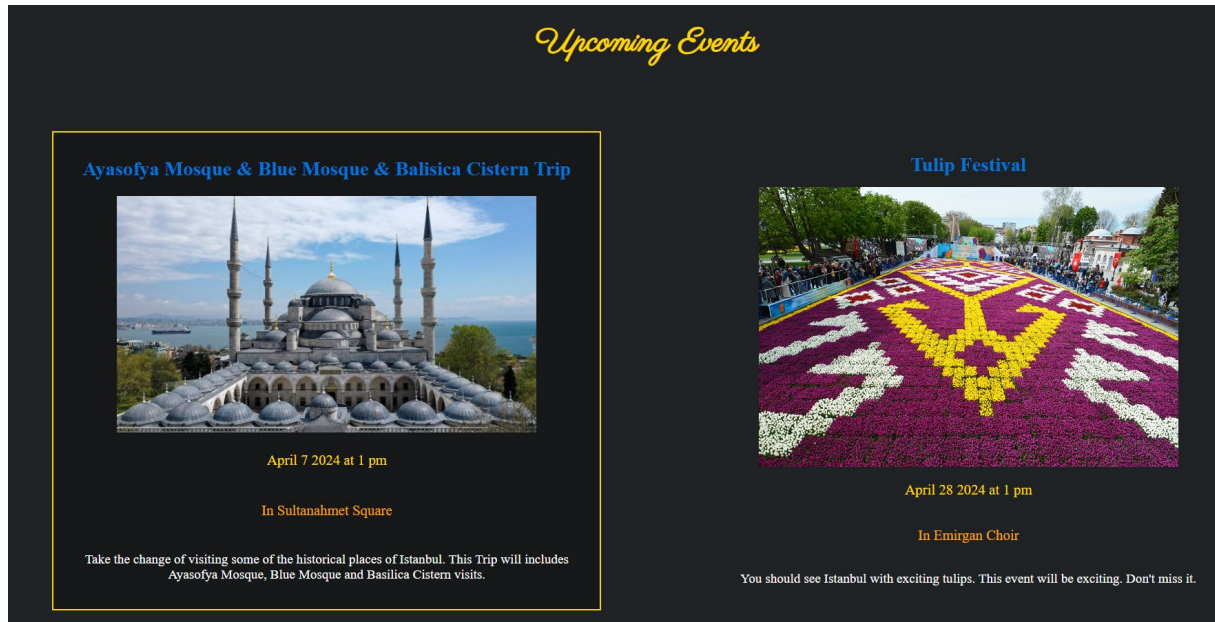

Photo 3: View of Events Page (Large Screens)

Photo 4: View of Events Page (Mobile Device Screen)

## Event Details Page

User can get detailed information about the event details and event comments in this page.  
User can also navigate to register page of the event.

### Ayasofya Mosque & Blue Mosque & Balisica Cistern Trip

April 7 2024 at 1 pm

In Sultanahmet Square

Take the change of visiting some of the historical places of Istanbul. This Trip will includes Ayasofya Mosque, Blue Mosque and Basilica Cistern visits.

[Register to Event](#)

### Event Comments

**FunnyTraveller**

**Exciting Places**

You should join this tour. The places are very beautiful.

**AdventureSearcher**

**Cool Place**

Balisica Cistern is so cold. It will be very good in sunny summer place.

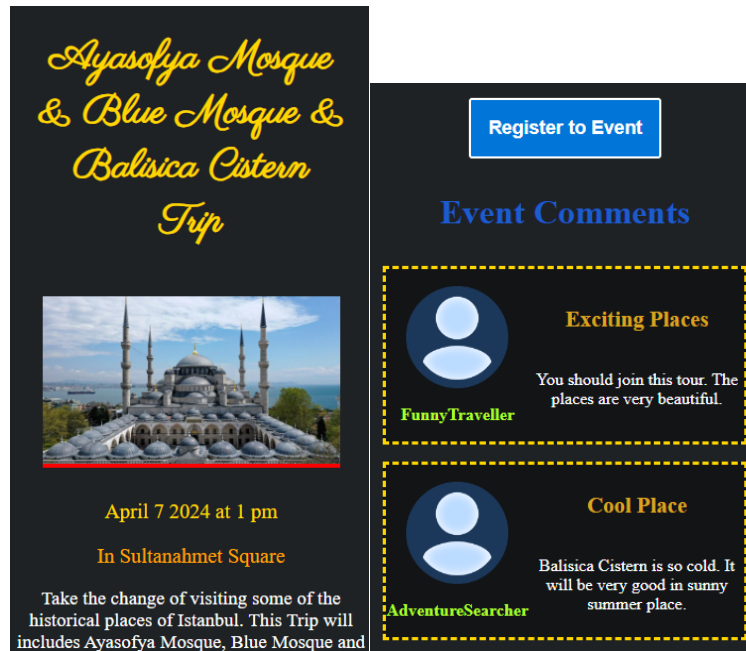

**PlaceExplorer**

**Blue Mosque**

I am very curious about Blue Mosque.

## Database Architecture

There exists 3 table in this project.

### Events Table

Events table consists of 6 attributes.

**eventID:** Primary key of the events table. Attribute type: Integer.

**eventHeader:** Corresponds to event name. Attribute type: Varchar(100).

**eventDateTime:** Corresponds to event name and time. Attribute type: Varchar(80).

**eventLocation:** Corresponds to event location. Attribute type: Varchar(80).

**eventDescription:** Corresponds to event description. Attribute type: Varchar(255).

**eventImage:** Corresponds to event photo name. Photos are in the public/images folder.

Attribute type: Varchar(100).

## Project File Description

**Controllers Folder:** Includes middleware function files inside it.

**Database Folder:** Includes databaseCommands.js file (it includes sql commands) and pool.js file (it provides mysql server connection with mysql2 api).

**Mail Folder:** Includes sendMail.js file (which send mails with using nodemailer api).

**Node\_modules Folder:** Includes third party package folders. (After downloading the project files from github it requires to use **npm install** command.).

**Public Folder:** Includes fonts, icons, images, scripts (javascript files in this folder), styles (css files in this folder) folders.

**Routes Folder:** Includes routing files. (E.g: domain/ corresponds to index).

**Views Folder:** Includes HTML files. (In this folder file extensions are in ejs (embedded javascript) format because of dynamic rendering.)

**App.js file:** Main file of the project.

**Package-lock.json file:** This file keeps track of the exact version of each installed package and its dependencies.

**Package.json File:** Includes information about node js project (dependencies, used libraries etc)
